

# Re>Close the loop. With BANFF.

*Sympatex wants to do not only what is legally necessary, but also what is technically possible to close the ecological cycle as quickly as possible.*

With the 100% recyclable, PTFE- and PFAS-free Sympatex membrane, which has been completely climate-neutral since 2017, we already offer laminates with textile waste from the circular economy. Our goal is for at least 50% of the raw materials required for the Sympatex laminate portfolio to come from a circular supply chain and to be fully recyclable again by 2025 - and even 100% by 2030.

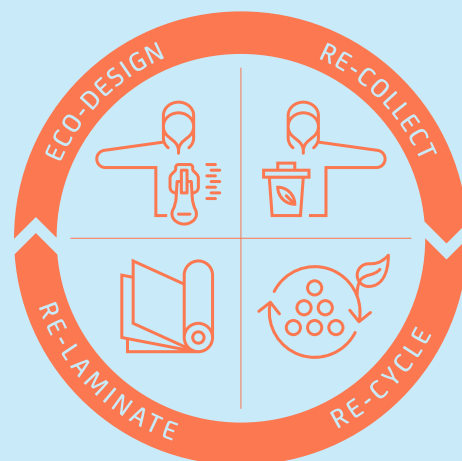

With the functional textile BANFF, we present a new laminate with a pure PES upper fabric made of 100% old textiles. The soft and light article has a natural look.

Thanks to 100% recyclable, PTFE-free membrane made of polyether/ester, the mono-material GRS-certified article can be returned to the textile cycle at the end of the product life cycle. The development of the article is part of our Sympatex „Agenda 2020“ with the aim of closing the textile cycle as quickly as possible. By 2030, 100% of the raw materials processed for the entire Sympatex laminate portfolio should come from the closed textile cycle.
