

Factsheet Company

„By 2030, we want to close the textile loop for functional clothing across the board and produce in a 100% circular fashion. For a clean environment – and for all those who come after us.“

Dr. Rüdiger Fox, CEO Sympatex

1986 Foundation of Sympatex

For over 35 years, our waterproof, windproof and breathable membrane has been a benchmark in terms of performance and eco-compatibility for the sports and outdoor industry as well as the challenging everyday work. Serving four segments on the highest level:

1. Apparel
2. Footwear
3. Contract & Workwear
4. Technical Applications.

Principles

For our membrane and laminates, we have a committed focus on polyester. This not only helps us save water and CO2 emissions, but with our mono-material product strategy, it also allows for easy recycling. We offset all emissions that we cannot avoid during membrane production through carefully selected projects. Our brand partners design minimalist products from mono-material. The timeless design extends the useful life and the mono-material simplifies the recycling of the product at the end of the product life, because it can be done without separating the individual components.

We love Polyester because it is the easiest material to recycle – and its everywhere.

Innovation

Beside our continuous ambition to fulfill our eco-commitments in the shortest possible time, a strong focus of innovation pipeline is the development of new assembly technologies that avoid traditional sewing and taping.

We love polyester as it allows thermoforming and welding and as such eases dramatically the final product assembly.

People

Global Headquarters in Munich. Production and manufacturing takes place in Europe & Asia depending on short supply chain, customer needs and factory location.
